*The following is the fourth installment of a 12-part series exploring the question: Who is Hetronic in the Radio Remote Control Industry, and why Should I Care?*

## Want to Upgrade Your Hydraulic Crane the Easy Way?

**The success of your business** has always been one of the most important considerations of our business, period!

**Now for the most cost-effective** upgrade to your hydraulic crane, Hetronic's complete and easy-to-mount MEC-ACT system is the perfect solution for you.

**The MEC-ACT system** includes the RRC system (transmitter and receiver), actuator per boom function, and complete installation kit. That's it! No additional material or modifications to your truck-mounted crane or other hydraulic machine.

**Designed for optimum efficiency**, MEC-ACT connects directly through mechanical linkages to the hydraulic-operated valves on your crane. Whether your machine uses manual/electro-solenoid valves or a serial interface, the MEC-ACT system perfectly fits with your machine.

**Featuring fully-proportional joysticks** for sensitive and jerk-free control, all our NOVA transmitters include fast/slow speed selector switches and personal speed programming, standard.

**Well-known for their ergonomic** design and smooth operation, the NOVA family of rugged transmitters excel in the harshest of environments.

**For more information** on MEC-ACT and more, please visit our website, or stop by our booth (E6 C020) at Intermat 2009.

**Proven in thousands of existing field installations, the complete, no-hassle MEC-ACT system easily upgrades your hydraulic crane.**
